Виртуальное сообщество для обмена знаниями и опытом, которое насчитывает **более 150 000 профессионалов по всему миру**. На данном ресурсе можно пользоваться обширной библиотекой членов SPE, обмениваться информацией, задавать вопросы и участвовать в дискуссиях с лидерами отрасли со всего мира

<http://connect.spe.org/home>

OnePetro

Огромная онлайн-библиотека по всем направлениям нефтегазовой отрасли. На сегодняшний день на данном ресурсе имеется **более 180 тысяч научных публикаций** по самым разным тематикам

The screenshot shows the OnePetro website interface. At the top, there is a navigation bar with links for 'Help', 'About us', and 'Contact us'. Below this is a main navigation bar with 'Home', 'Journals', 'Conferences', 'Cart', and 'Log in / Register'. A search bar is prominently displayed with the text 'FPSO' and a 'Search' button. Below the search bar, there are filters for 'Peer reviewed only' and 'Published between: YYYY and YYYY'. A sidebar on the right lists 'Volume 70' through 'Volume 66' under the heading 'Многоорганизационная библиотека'. The main content area features an article titled 'Understanding FPSO's' with a 5-star rating. Below the article title, there is a table with metadata: Authors (Malcolm Sharples (ABS Group)), DOI (https://doi.org/10.2118/0801-0014-JPT), Document ID (SPE-0801-0014-JPT), Publisher (Society of Petroleum Engineers), Source (Journal of Petroleum Technology), Volume (53), Issue (08), and Publication Date (Август 2001). Below the metadata table, there are buttons for 'Add to cart' and 'Export citation'. At the bottom of the article, there is a section for 'This article's rating: (Average from 3 ratings)' with a 5-star rating. A sidebar on the right titled 'Other Resources' includes a link to 'PetroWiki'.

PCP systems for low productivity wells

Page status: Approved

Low-productivity wells by definition deliver relatively low fluid rates; as a result, operators usually attempt to maximize recovery rates by producing them at low bottomhole pressures. If produced aggressively, the fluid column can be drawn down to very low levels even in some relatively high-productivity wells. These pumped-off conditions can cause pump inflow and gas interference problems that prevent the pump cavities from filling completely with liquid. This results in low volumetric pump efficiency, as illustrated by the field data in Fig. 1.

Overview

Pump inflow problems are common in wells producing viscous fluids under low submergence conditions. With highly viscous fluids, difficulties occur when the pump is operated at a speed that exceeds the rate at which the fluid can flow into and up the narrow pump cavities (cavity flow velocity of the PC pump). Fig. 2 shows, for example, a dramatic decline in pump operating efficiency with higher speed in a heavy oil well application. Although the trend evident in the data can be attributed in part to increased gas interference and reduced well inflow over time, the lower bottomhole pressures and pump inflow constraints definitely contributed to the large decline in efficiency.
