**Search results: Your search for liquid and loading and gas and well, published between 2012 and 2017 has returned 2,568 results.**

## Topic of them mostly:

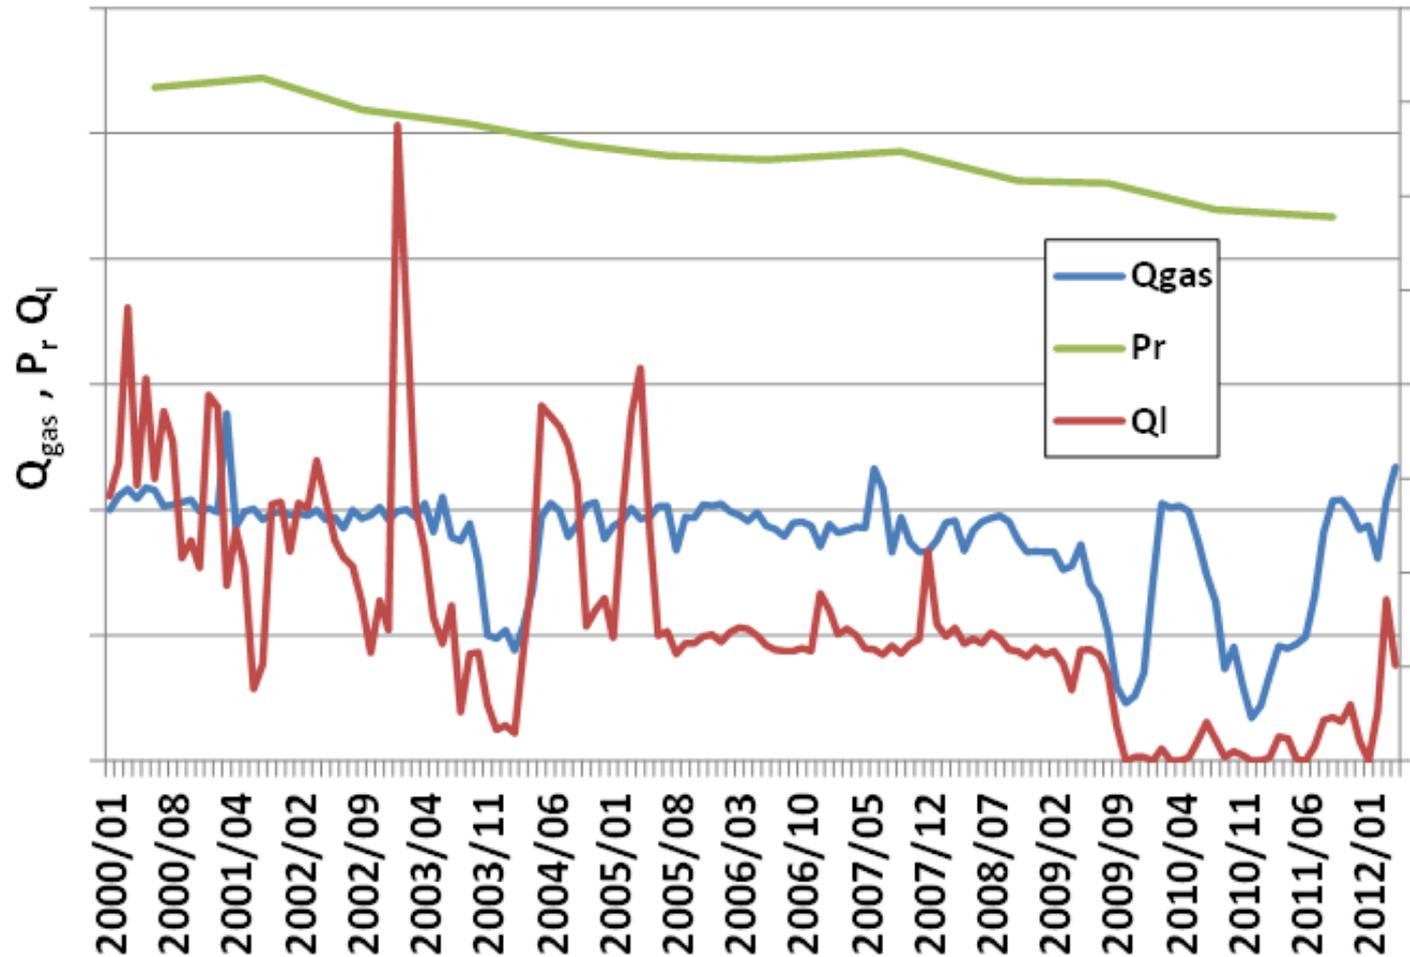

- **Recognition**
- **Modeling**
- **Case studies using well known methods**

# FACTS OF LIQUID LOADING

## Liquid in the gas stream

- **water, condensate**
- **critical velocity**
- **small amount enough**
- **increase FBHP**
- **self-generating effect**
- **decreased gas production**
- **decreased recovery (higher abandonment pressure)**

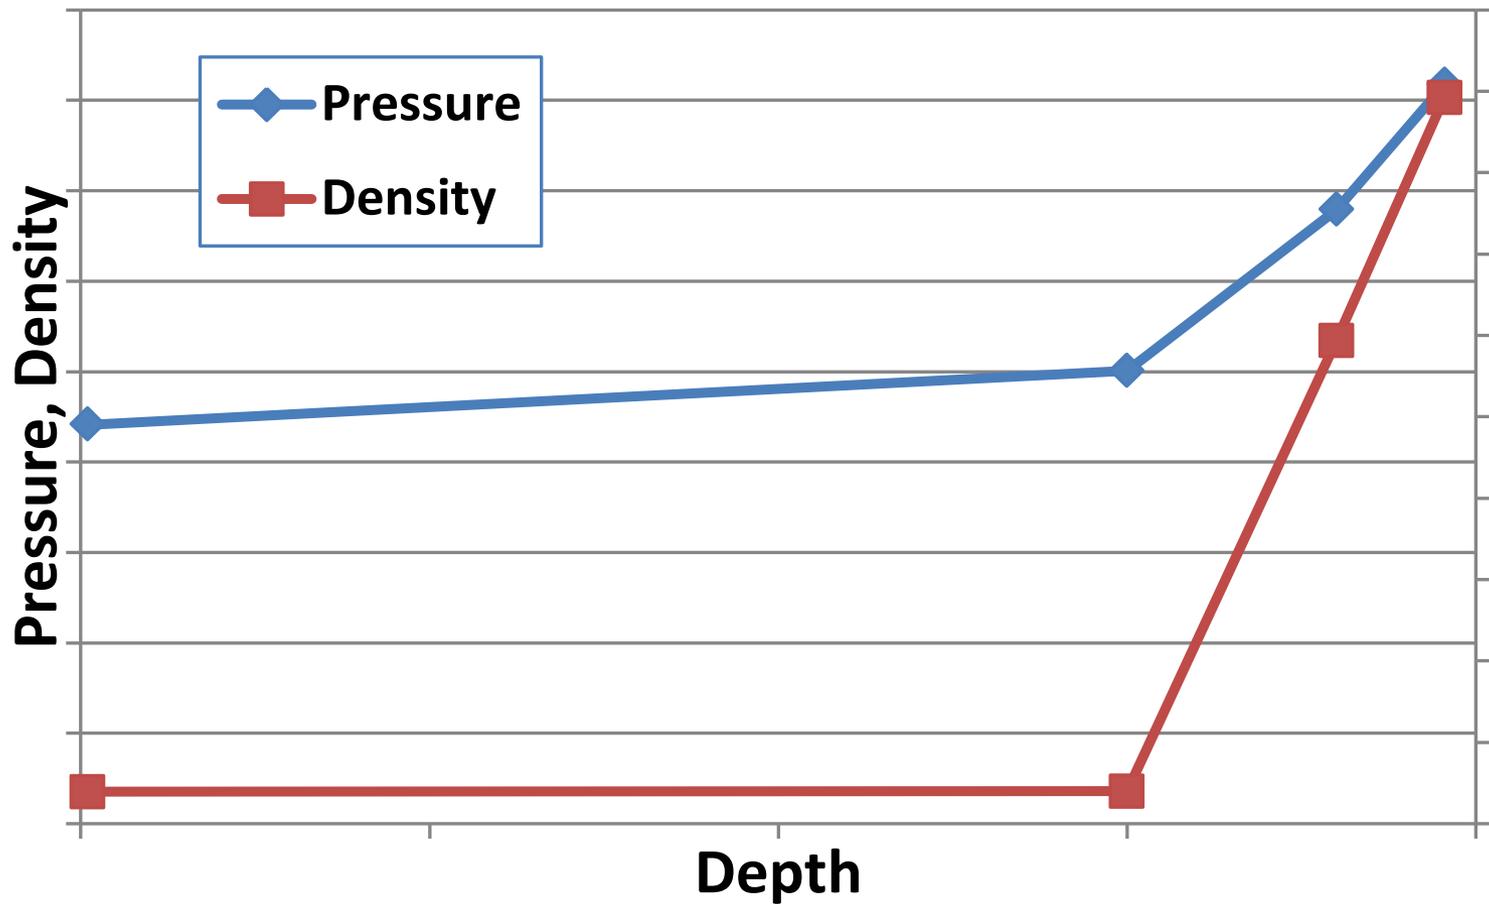

# Recognition of fluid load

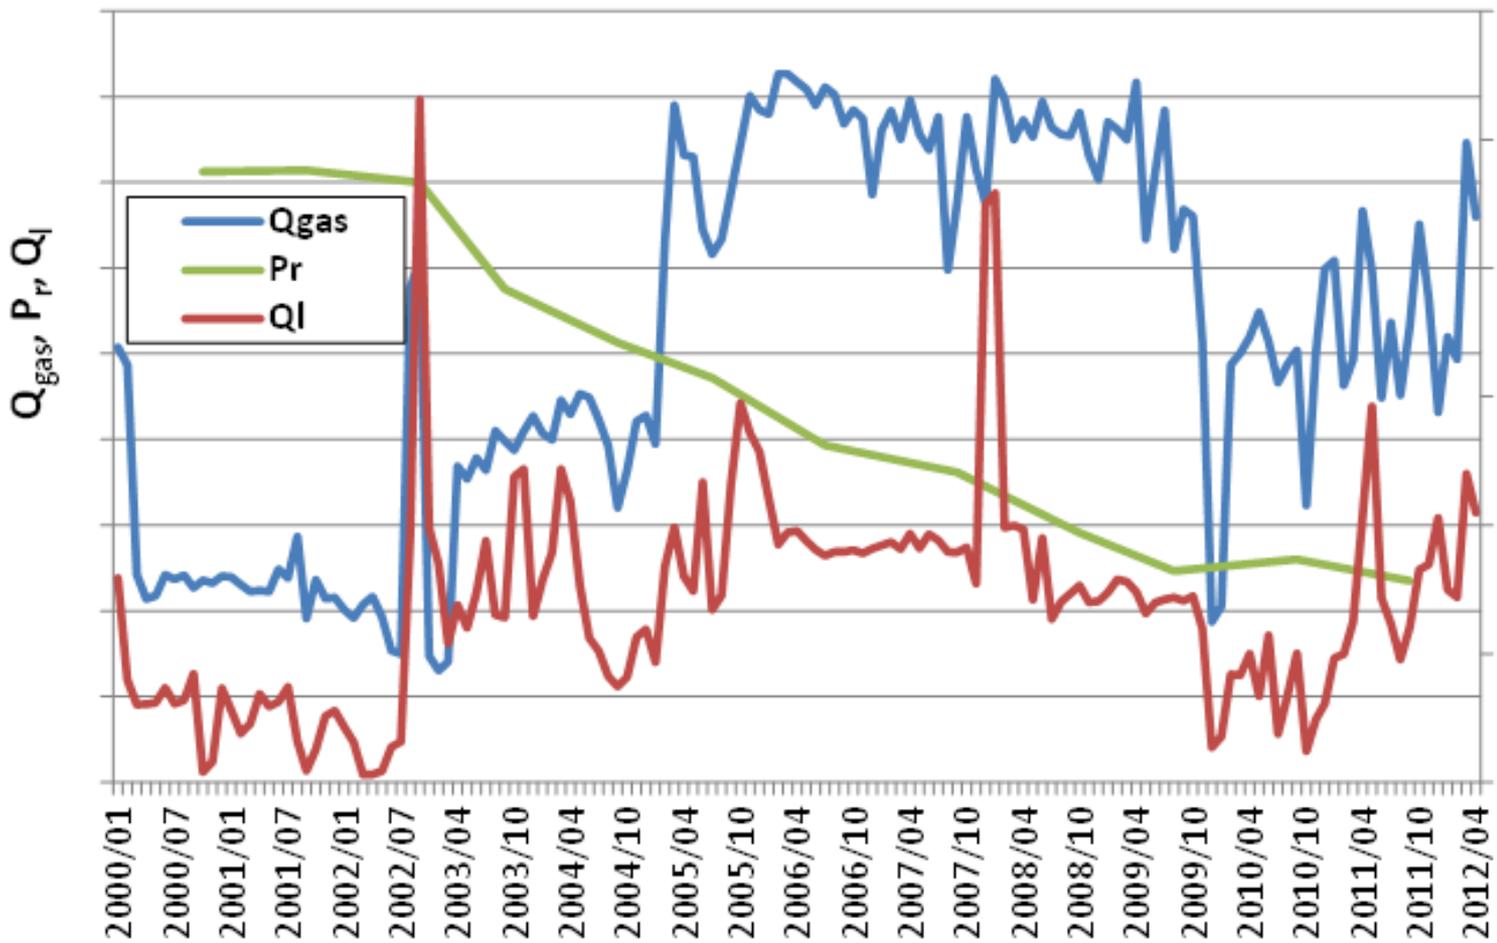

# Recognition of fluid load „usual”

Date	Depth [m]	Pressure [Mpa]	$\Delta l$ [m]	$\Delta p$ [Mpa]	Density [kg/m <sup>3</sup> ]

# Gradient measurements „un-usual load”

# Gradient measurements „un-usual load”

## Dew point curve

— Saturation pressure

— Well pressure along the tubing

# MODELING

**Transient nature of loading process:**

- **correlations,**
- **analytical,**
- **numerical.**

**Help to understand, to identify, to predict!**

**Important, but not enough!**

▪

# CASE STUDIES USING WELL KNOWN METHODS

- **Sizing Tubing**
- **Compression (reduced WHP)**
- **Plunger Lift**
- **Foam**
- **Hydraulic Pumps**
- **Beam Pumps**
- **Gas Lift**
- **ESP**
- **PCP**
- **Thermal methods**
- **Cycling**

# CONTINUOUS REMOVAL OF LIQUID

- **Tubing sizing**
- **Compression**
- **Foam**
- **Thermal methods**

**Prevent liquid accumulation**

**Keep FBHP constant**

**Requires relatively higher rates or pressure**

# INTERMITTENT METHODS

## **Problem:**

- **FBHP increasing during liquid accumulation**

## **Group 1**

- **Hydraulic Pumps**
- **Beam Pumps**
- **Gas Lift**
- **ESP**
- **PCP**

## **Group 2**

- **Cycling**
- **Plunger Lift**

# INTERMITTENT METHODS

- **Group 1 – Expensive!**
- **Group 2 – Cheaper methods!**
- **Periodic liquid load, higher abandonment pressure!**

# IMPROVED METHODS

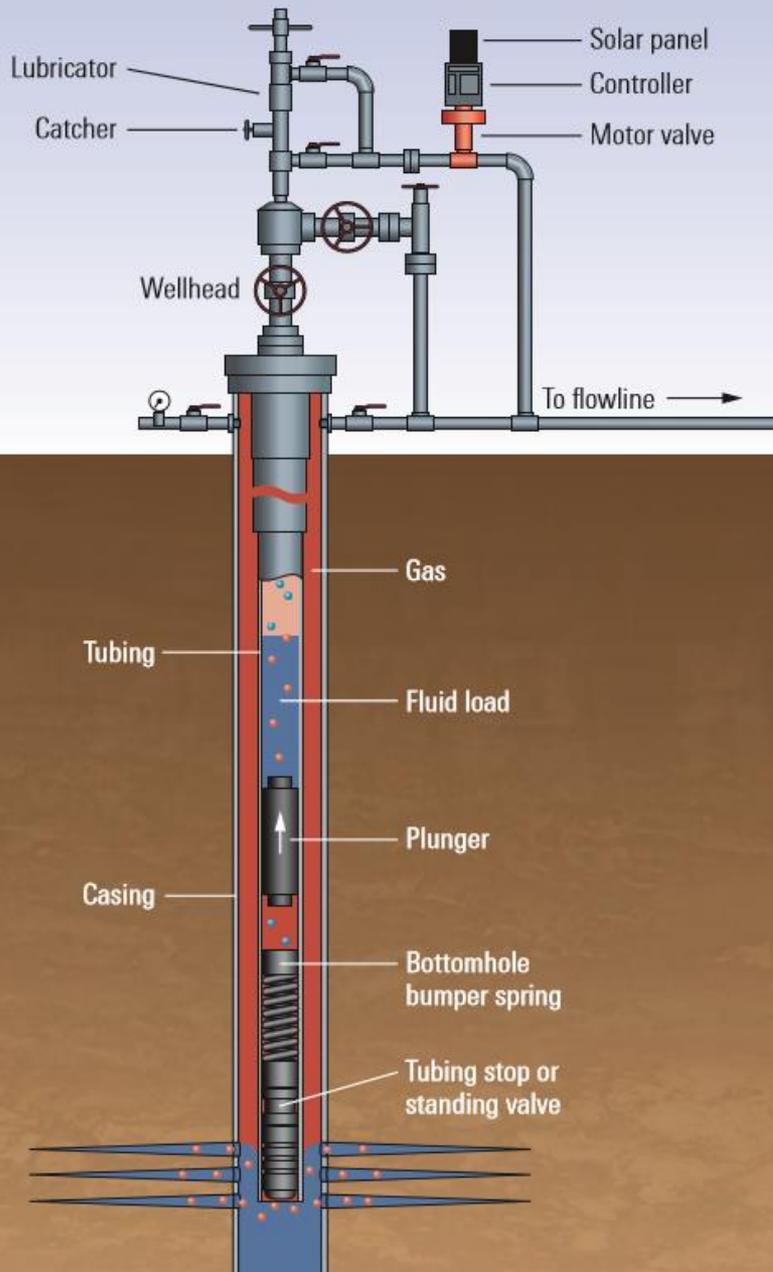

## Goals:

### **Avoid liquid accumulation on formation**

- **extend applicable pressure and rate ranges**

### **Keep it as cheap as possible:**

- **simple**
- **small unit cost**
- **no external energy**

## Conventional Plunger Lift System

# For usual loading

$P_r \sim 50$  bar

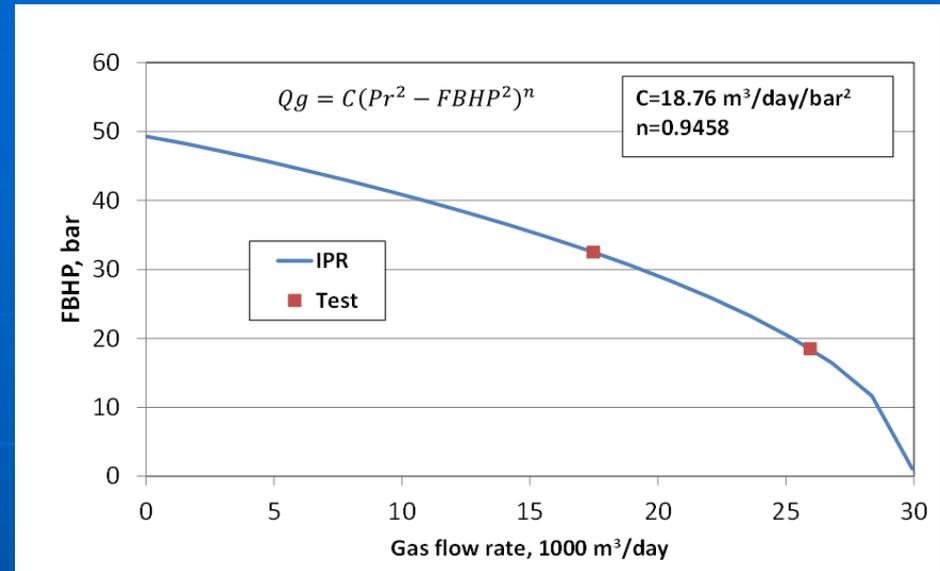

$L = 2000$  m

$d_c = 7$  in

$d_t = 3.5$  in

$Q_g \sim 26\,000$  m<sup>3</sup>/d

$Q_w \sim 8$  m<sup>3</sup>/d

## Calculated Plunger Lift parameters (Foss and Gaul)

$P_{cmin} = 7,8$  bar

$P_{cmax} = 10,2$  bar

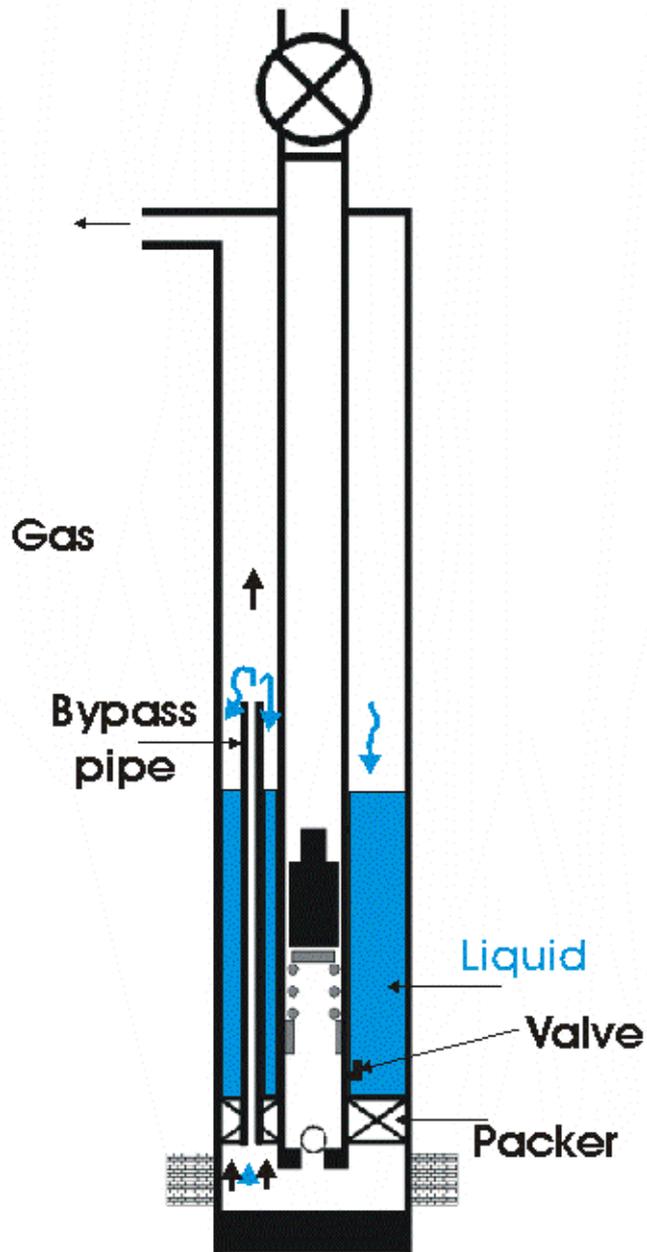

$Q_w = 8,6$  m<sup>3</sup>/d

$Q_g \text{ req} = 1400$  m<sup>3</sup>/d

Theoretically:

Until  $P_r > \sim 12-14$  bar the well can be plunger lifted!

# „IMPROVED” PLUNGER LIFT

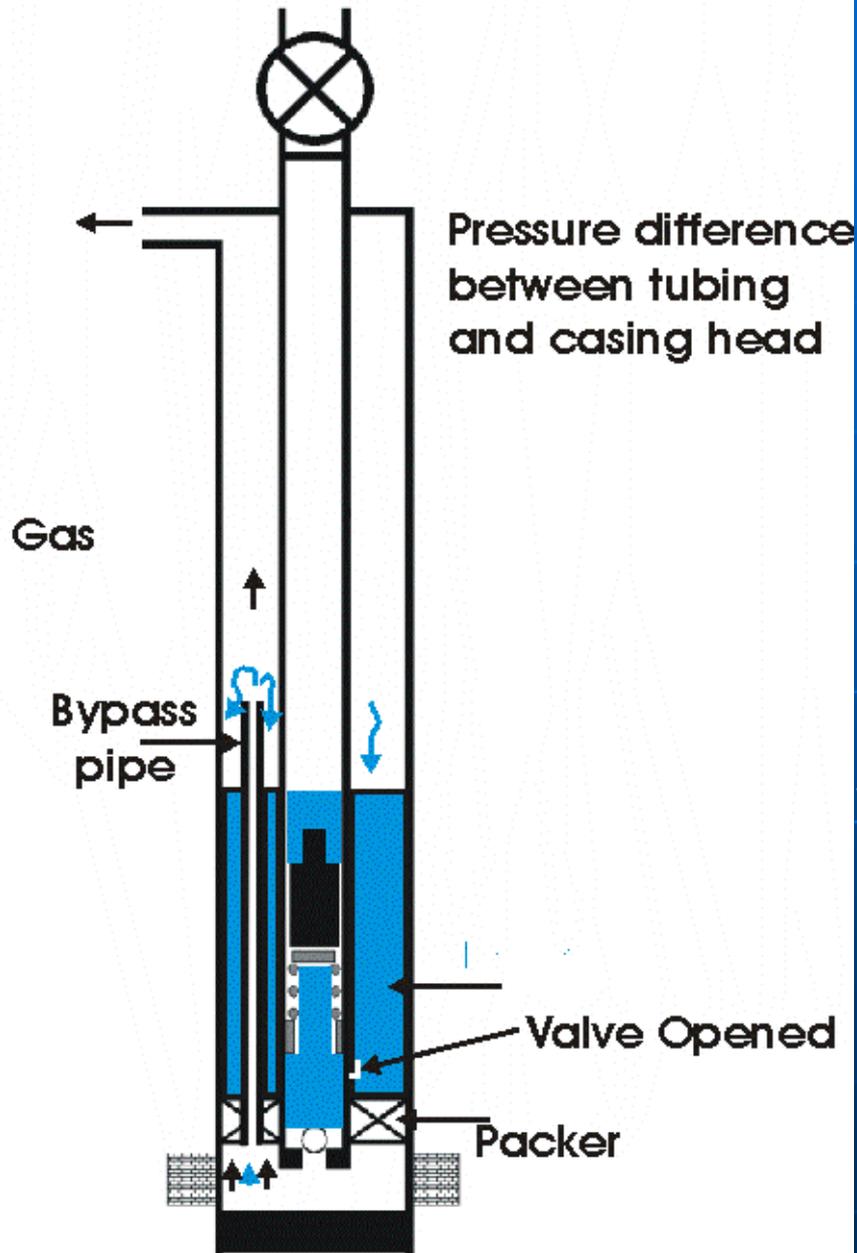

**Bypass pipe**

**Production through annulus  
Increasing Liquid Level in Annulus  
No backpressure!**

**Valve or Level control  
Opened at prescribed liquid level**

# „IMPROVED” PLUNGER LIFT

Liquid pressed to tubing

Pressure difference formed

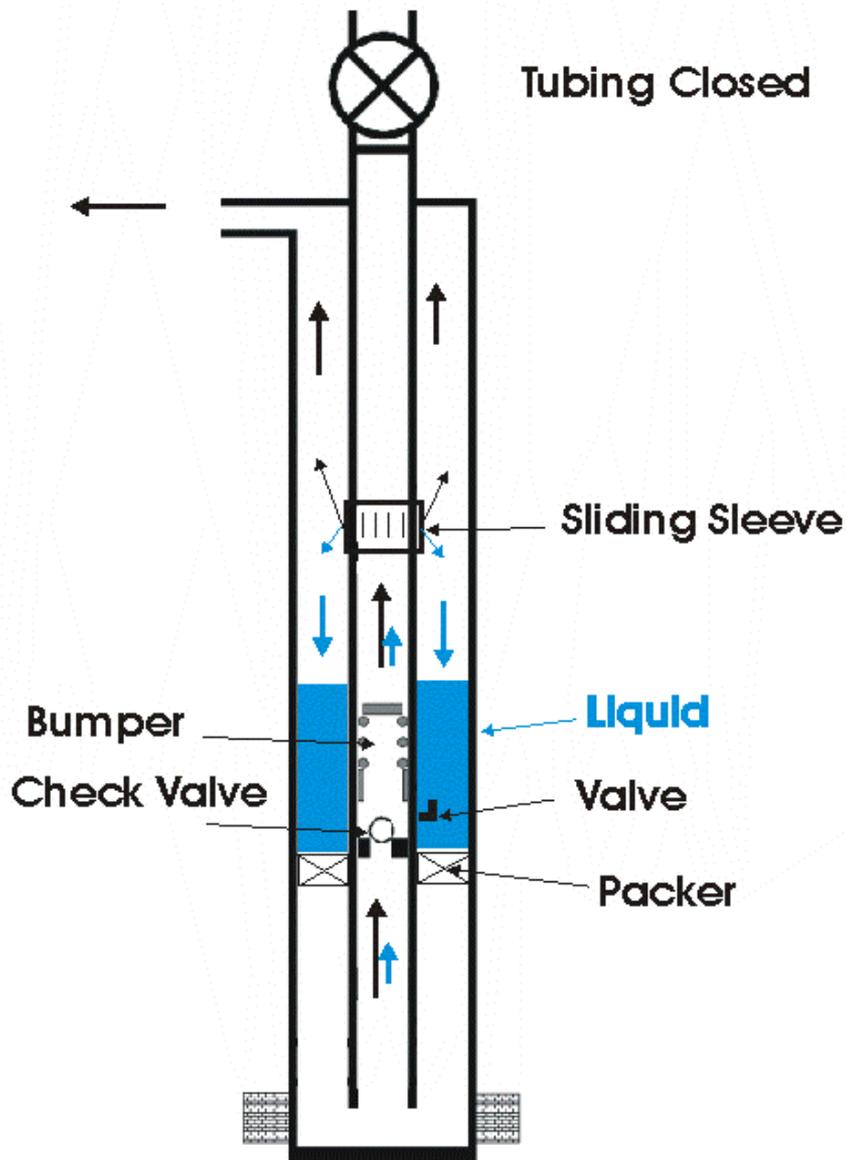

$$P_t > P_c$$

Close the casing

Wait for req. pressure build up

Open tubing  
Plunger and liquid surfaced

Close tubing  
Open casing

# „IMPROVED” PLUNGER LIFT „UNUSUAL”

Sliding sleeve

Production through tubing to annulus

Increasing Liquid Level in Annulus  
No backpressure!

Valve and Level control  
Signal to Surface at prescribed  
liquid level

Close casing  
Wait for pressure buildup

Valve Opened at prescribed  
pressure  
Liquid equalised to tubing

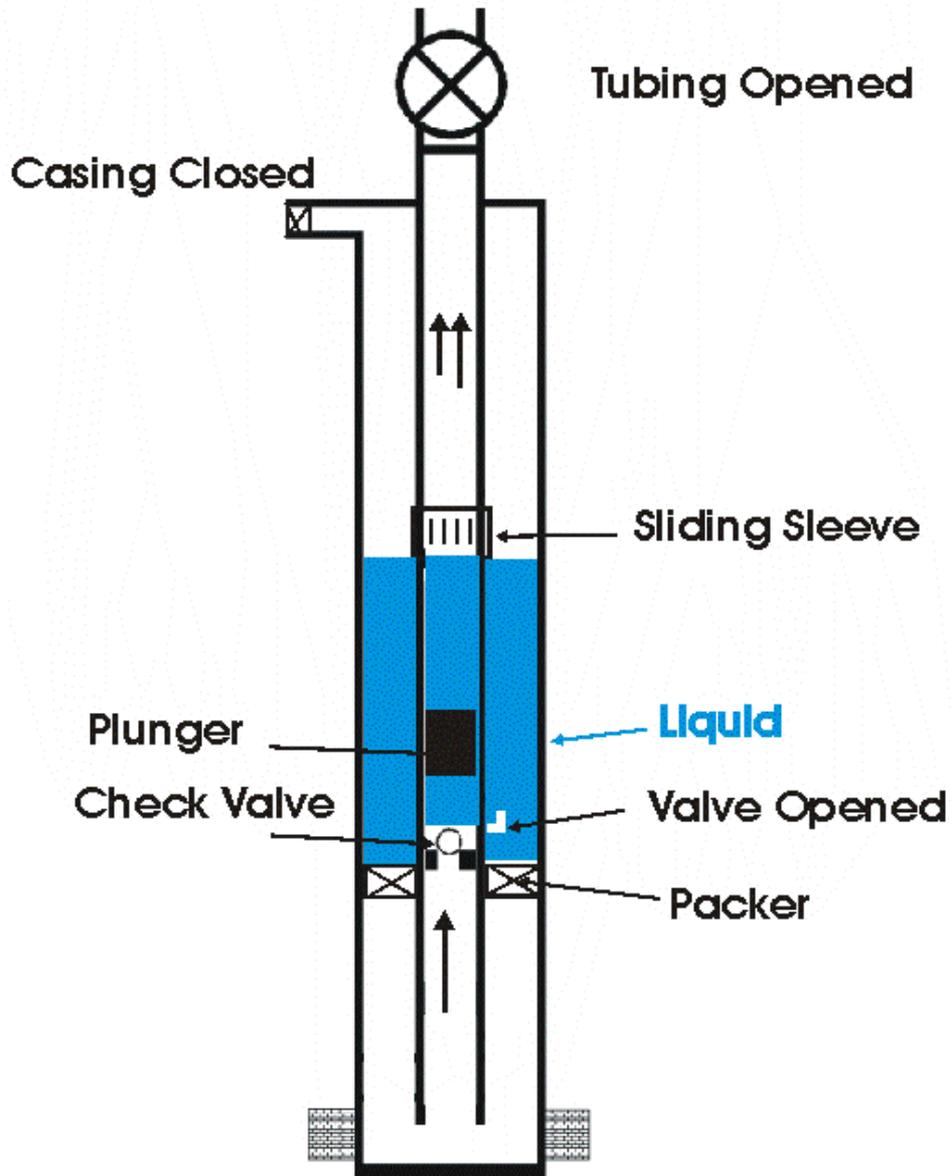

# „IMPROVED” PLUNGER LIFT „UNUSUAL”

Plunger to the bumper

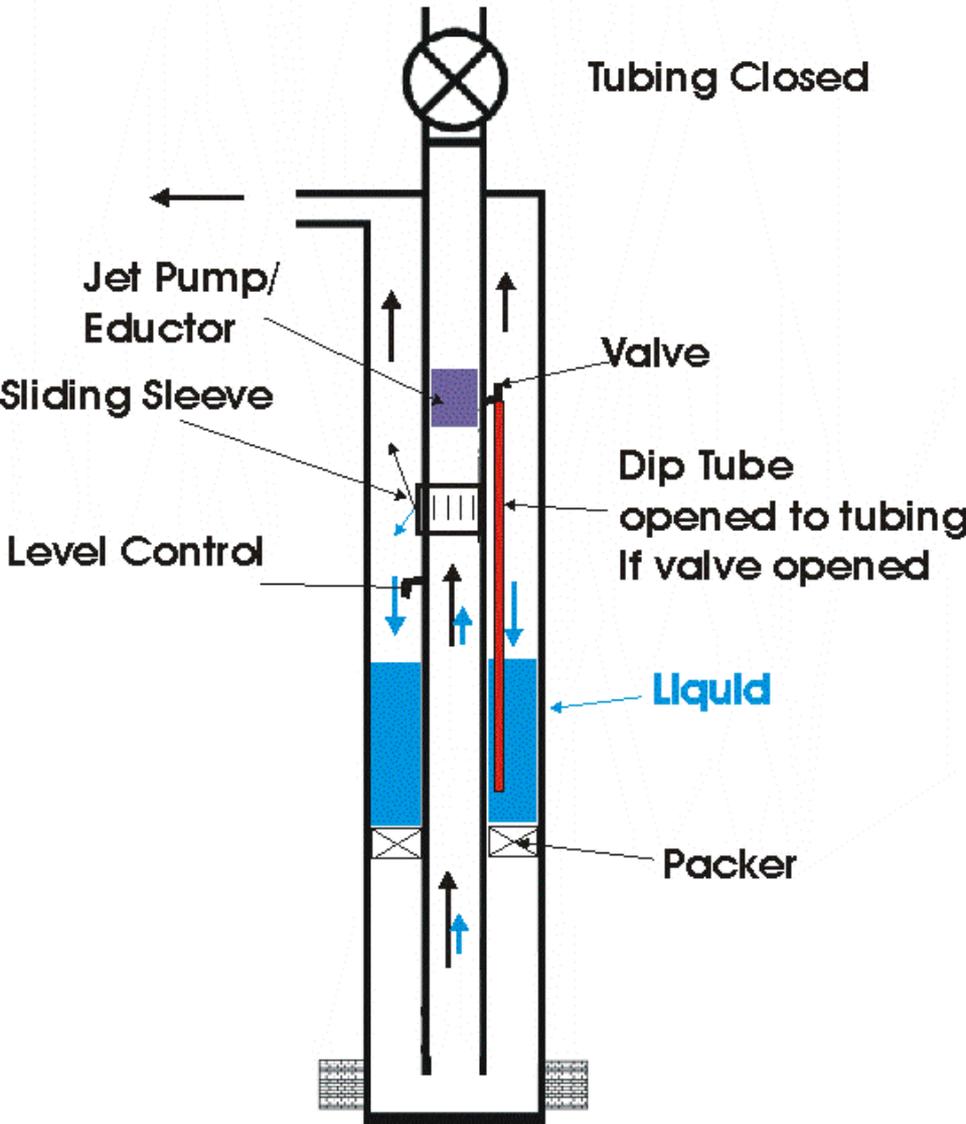

Open Tubing

Liquid and plunger to the surface

Smaller depth, smaller req.  
pressure

# JET PUMP „UNUSUAL”

**Sliding sleeve**

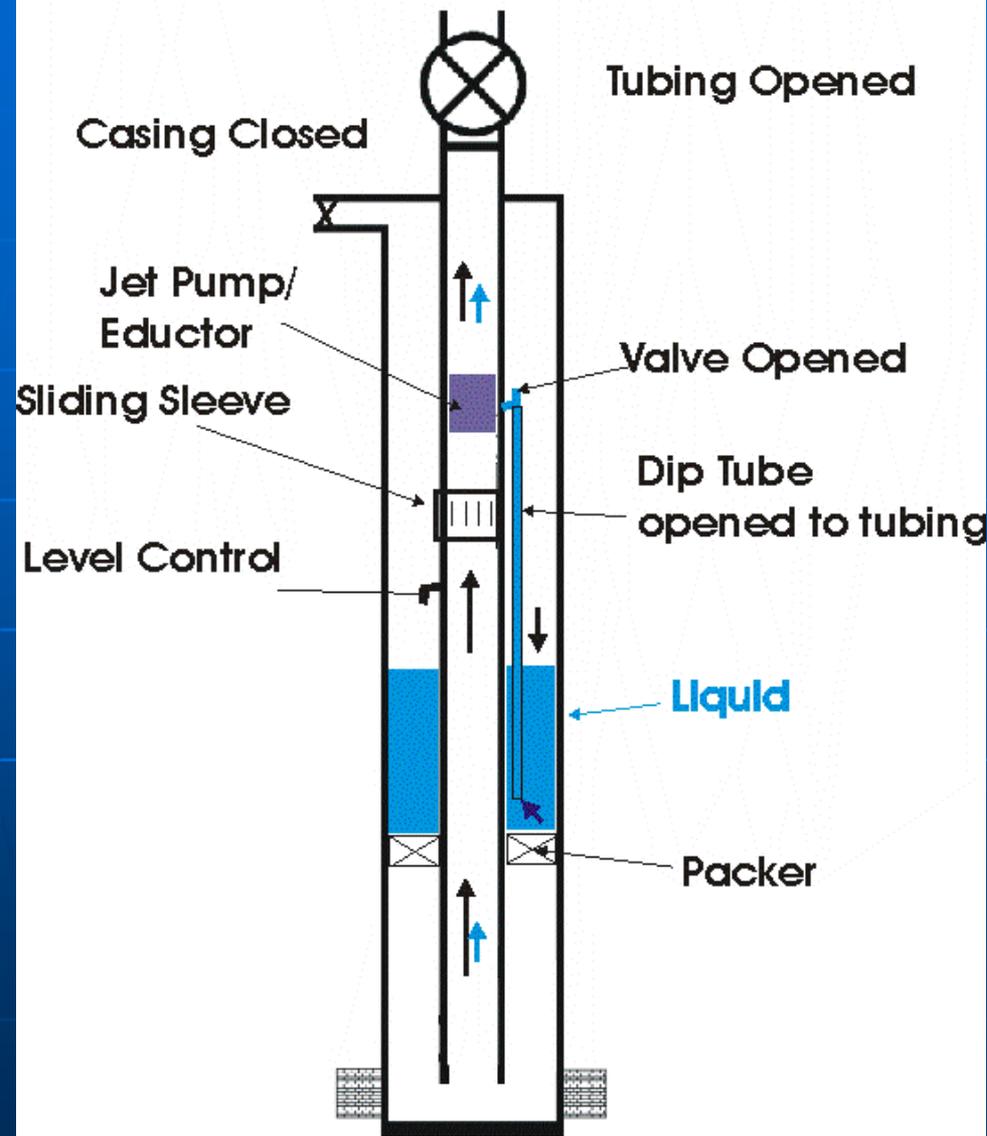

**Production through tubing to annulus**

**Increasing Liquid Level in Annulus  
No backpressure!**

**Valve and Level control  
Signal to Surface at prescribed  
liquid level**

**Close casing  
Wait for pressure buildup**

# JET PUMP „UNUSUAL”

**Valve and tubing is opened at prescribed pressure**

**Liquid is pressed to Jet Pump through Dip Tube**

**Powerfluid is the accumulated gas**

**Liquid transported to the surface in small droplets**

**No moving Parts**

# CONCLUSIONS

**Selection of the right unloading method is critical!**

## **Advantages:**

- **Simple**
- **Low cost equipment**
- **No external energy required**

## **Possible Good Choices**

- **Plunger Lift**  
**Conventional**  
**Improved**  
**For unusual liquid loads**
- **Jet Pump with Produced Gas as Power Fluid**

**THANK YOU  
FOR YOU ATTENTION!**
